Remote Learning

Our remote teaching is provided via Google Classroom. Through daily teaching videos, teachers follow a curriculum sequence that mirrors that which children would follow had they been in school. Teaching videos for each lesson provide frequent, clear explanations of new content. Teachers are available throughout the school day via Google Classroom to answer questions and give further support if required.

Children are set daily assignments that are meaningful and ambitious in a range of subject areas in order to maintain a broad and balanced curriculum. The children upload completed work via Google Classroom. Constructive, individual feedback is provided by teachers on a daily basis, in addition to recognition of effort.

Children are provided with access to online reading books which follow the same progression as those in school. Packs of 'real' books are provided to children where required; these are changed regularly to ensure that no child is without reading material. Parents of younger, emerging readers send teachers weekly videos of their child reading to enable teachers to continue to monitor progress and offer support where required. Any child who does not have remote access will be provided with a school device to ensure that no child is left without support.
